Computer science is the study of processes that interact with data and can be represented as data in the form of programs. It is the theory, experimentation, and engineering that enables the use of algorithms to manipulate, store, and communicate digital information. A computer scientist studies the theory of computation and the practice of designing software systems.

Note. The algorithm has two code paths. It takes one when the Hessian matrix H is an ordinary (full) matrix of doubles, and it takes the other when H is a sparse matrix. For details of the sparse data type, see Sparse Matrices (MATLAB). Generally, the algorithm is faster for large problems that have relatively few nonzero terms when you specify H as sparse.

4 8 16 In the first call to the function, we only define the argument a , which is a mandatory, positional argument. In the second call, we define a and n , in the order they are defined in the function. Finally, in the third call, we define a as a positional argument, and n as a keyword argument.. If all of the arguments are optional, we can even call the function with no arguments.
