Chapter 7 Electronic Configurations and the Properties of Atoms - 3 - In this text, we will arbitrarily assign $m_s = +\frac{1}{2}$ to electrons represented with an upward arrow (also called "spin up" electrons) and $m_s = -\frac{1}{2}$ to electrons represented with a downward arrow (also called "spin down" electrons).

Chapter 6 - An Introduction to Chemistry: Oxidation

An atom is the smallest constituent unit of ordinary matter that has the properties of a chemical element. Every solid, liquid, gas, and plasma is composed of neutral or ionized atoms. Atoms are extremely small; typical sizes are around 100 picometers (a ten-billionth of a meter, in the short scale). Atoms are small enough that attempting to predict their behavior using classical physics "as ...

A covalent bond, also called a molecular bond, is a chemical bond that involves the sharing of electron pairs between atoms. These electron pairs are known as shared pairs or bonding pairs, and the stable balance of attractive and repulsive forces between atoms, when they share electrons, is known as covalent bonding. [better source needed] For many molecules, the sharing of electrons allows ...
