4 given  $X_j = x_j$  (Ref.2,3,6,7) Unit IV: ORDER STATISTICS (i) Definition of Order Statistics based on a random sample. (ii) Derivation of: (a) Cumulative distribution function of  $r$ th order statistic. (b) Probability density functions of the  $r$ th order statistic. (c) Joint Probability density function of the  $r$ th and the  $s$ th order statistic ( $r < s$ ) (d) Joint Probability density function of all  $n$  ...

The choice of  $n = 30$  for a boundary between small and large samples is a rule of thumb, only. There is a large number of books that quote (around) this value, for example, Hogg and Tanis' Probability and Statistical Inference (7e) says "greater than 25 or 30". That said, the story told to me was that the only reason 30 was regarded as a good boundary was because it made for pretty Student's  $t$  ...

### **What references should be cited to support using 30 as a**

Questionnaires were mailed to respondents (Owners, Consultants, Managers, Engineers, and Contractors), completed forms were requested to be mailed or faxed back to the researcher, and the response for this request was poor.
