EENG115/INFE115 Introduction to Logic Design . This is core course of Electrical and Electronic Engineering and Information System Engineering that presents basic tools for the design of digital circuits. It serves as a building block in many disciplines that utilize data of digital nature like digital control, data communication, digital computers etc.

A semiconductor material has an electrical conductivity value falling between that of a metal, like copper, gold, etc. and an insulator, such as glass. Their resistance decreases as their temperature increases, which is behaviour opposite to that of a metal. Their conducting properties may be altered in useful ways by the deliberate, controlled introduction of impurities ("doping") into the ...

The electrical Design is a continuing process; it is hard to define when it begins and when it ends. The electrical Design is commonly broken into discrete stages, allowing the electrical Designer to present an integrated design package and the client to commit to proceeding to the next stage.
