Objective-collapse theories, also known as quantum-mechanical spontaneous-localization models (QMSL), are an approach to the interpretational problems of quantum mechanics. They are realistic and indeterministic and reject hidden variables. The approach is similar to the Copenhagen interpretation, but more firmly objective.. The most well-known examples of such theories are:

Objectivity is a philosophical concept of being true independently from individual subjectivity caused by perception, emotions, or imagination. A proposition is considered to have objective truth when its truth conditions are met without bias caused by a sentient subject. Scientific objectivity refers to the ability to judge without partiality or external influence, sometimes used synonymously ...
