

smart structures and materials pdf

Smart materials, called also intelligent or responsive materials, are designed materials that have one or more properties that can be significantly changed in a controlled fashion by external stimuli, such as stress, temperature, moisture, pH, electric or magnetic fields, light, or chemical compounds. Smart materials are the basis of many applications, including sensors and actuators, or ...

Smart material - Wikipedia

A shape-memory alloy (SMA, smart metal, memory metal, memory alloy, muscle wire, smart alloy) is an alloy that "remembers" its original shape and that when deformed returns to its pre-deformed shape when heated. This material is a lightweight, solid-state alternative to conventional actuators such as hydraulic, pneumatic, and motor-based systems. Shape-memory alloys have applications in ...

Shape-memory alloy - Wikipedia

Rutgers engineers have invented a "4D printing" method for a smart gel that could lead to the development of "living" structures in human organs and tissues, soft robots and targeted drug delivery.

Glass collisions: It's a huge problem for birds. Up to a billion birds die in collisions with glass each year in the United States. Although most people have seen or heard a bird hit a window, they often believe it is an unusual event.

Ferroelectric bilayers are leveraged in concert with a metasurface to create tunable infrared devices possessing high-speed, low-power and latchable switching (see article number 1800862 by Thomas E. Beechem and co-workers). Together, these characteristics highlight the potential of ferroelectrics for dynamic infrared elements while also emphasizing the general utility of leveraging phonons to ...

Precast concrete offers durable, flexible solutions for floors, walls and even roofs in every type of domestic construction from individual cottages to multi-storey apartments. Concrete's high initial embodied energy can be offset by its extended life cycle (up to 100 years) and high potential for reuse and relocation.

The European "Smart Cities & Communities Initiative" of the Strategic Energy Technology Plan (SET-Plan) supports cities and regions in taking ambitious measures to progress by 2020 towards a 40% reduction of greenhouse gas emissions through sustainable use and production of energy.

European smart cities: The role of zero energy buildings

Cladding is a non-loadbearing skin or layer attached to the outside of a home to shed water and protect the building from the effects of weather. It is a key element in the aesthetic appeal of the home and directly influences both building cost and property value. Your choice of cladding has a significant effect on the environmental performance of your home.
